
Jason E. Dickens

3rd Vice Commander

Jason E. Dickens

Jason's professional career spans 20 plus years across the chemical, diagnostics, threat reduction consequence management, and biopharmaceutical sectors. Development, implementation and sustainment of innovative technologies and state-of-the art facilities to enhance operational performance has been his primary contribution throughout his career. This has involved facility fit evaluation, technology selection and development, process integrations, and qualification and validation. It has also involved establishing and maintaining relationships with supporting diverse contractors.

Jason has consistently conceptualized and communicated aligned goals and objectives followed by agile execution with resource coordination to deliver impactful outcomes to intractable challenges. Moreover, his background also includes building or cultivating high-performance teams and matrix teams with effective communication finesse underpinned by a consultative style, integrity, objectivity, and adaptability. His negotiation prowess to navigate and solve multifaceted problems across domains is also noteworthy.

On a personal level, Jason spends part of his time leveraging his passion for tradecraft to conduct do-it-yourself home repair and improvement, which includes electrical, plumbing, carpentry, modest HVAC maintenance, and IT infrastructure skills.

Jason brings a wide range of translatable skills with sufficient technical depth to Post 6 to ensure the facility and associated grounds are maintained to the highest standard and each event are supported congruent with contractual terms and conditions.

He plans to build a small cohesive team to support 3rd Vice Commander responsibilities. Obviously, this creates pivotal redundancies of skills and opportunities for the team to learn from one another.
